Montserrat, VP2

Admin,

Our team of Colorado hams - **N0KV**, **WD0E**, **W0ZA**, and **W0ETT** - are heading to Montserrat for a DXpedition June 10 - June 19th and plan to operate HF 80m through 10m using the call sign **VP2MKV** with modes CW, SSB, and RTTY running K3's, 500w, a tribander, spider antenna, and vertical/wire antennas. On 6m, we'll hope for some good Es using CW, SSB, and FSK441 using a K3 and THP 500w amp to a 6M5XHG at 30' on top of Gingerbread Hill Guesthouse 500' above local sea level. Look for our CQ's or 100w beacon (using a FT857) on 50.102 which we will monitor when the band isn't cooperating. We've requested the call sign **VP2MTT** for our 6m operation. We plan to check www.on4kst.com periodically for 6m info, and **WD0E** will check Ping jockey for FSK441 and satellite bulletin board for 2/432 satellite contacts. We're also planning a multi - limited entry in the ARRL June VHF Contest on 6m and 2m. On 2m, we only have 100w and a 7 element beam so we anticipate working regional stations using CW/SSB on that band. For other information and QSL methods, please see details at **VP2MKV** on www.QRZ.com. 73 Ken, **W0ETT** Parker, CO
